Upgrade to 20W solar panel

In the 2023 irrigation season, a software error in the 4KR led to increased power consumption and deeply discharged batteries that the 4W panel could not recharge.

To secure the power demand of the constant online connection, the digital water meter and pressure sensor, we offer these improvements:

1. update the software to version 1.8.
2. exchange 4W for 20W solar panel with new bracket.
3. exchange 18AH battery for 24AH battery (for unsold machines)

For replacement, please let us know which machines, year of manufacture 2023:

- **unsold machines in stock (FG):**

Solution: Upgrade to 20W solar panel, holder and 12V 24AH battery

- **are on the customer's site (FG).**

Solution: Upgrade to 20W solar panel, holder without 12V 24AH battery (no new battery will be exchanged for machines already sold and used)

According to the completed list, you will receive the material free of charge, with invoice. Please send us the 4W panel with holder and only unused 18AH batteries.

After receiving the parts, we will send you an invoice correction (credit note).

If you have any questions, please do not hesitate to contact Moritz Beinlich on 02676 9516-19.

Yours sincerely

Martin Beinlich, Ulmen, 18.01.2024
